.

- ① brought ② debate ③ to
- ④ the ⑤ his ⑥ new perspective
- ⑦ a ⑧ opinion

(4) 彼女はスマートフォンを鞆に入れたと思いましたが、見つかりませんでした。

23 , 24 find it.

- ① put ② in her bag ③ not
④ but ⑤ she had ⑥ she could
⑦ she thought ⑧ her smartphone

【4】 次の(1)・(2)の会話文の の中に入る最も適切な文をそれぞれ①～④の中から選びなさい。

解答番号は、(1) 25 ・(2) 26 。

(配点 8 点)

(1) A : The price of rice keeps going up, doesn't it?

B : That's right. We are really in trouble.

A : What's the reason?

B : 25

- ① I'm not quite sure why.
- ② I'm sorry to hear that.
- ③ There are too many rice fields.
- ④ There have been too many strikes in fisheries.

(2) A : Plastic is very harmful to the environment, isn't it?

B : Yes. To solve the problem, some scientists are developing new materials made from plants like corn, potatoes, and sugarcane.

A : 26

B : That's why these materials are getting to be used widely.

- ① The new materials are not biodegradable.
- ② The plant-based materials are not so strong as traditional ones.
- ③ Those resources are also renewable ones.
- ④ Traditional plastic is more friendly to the environment.

【5】 次の文章の(1)～(5)の の中に入る最も適当な語をそれぞれ①～④の中から選びなさい。

解答番号は、(1) 27 ～(5) 31 。

(配点 15 点)

Snow removal work is in full swing along a stretch of a northern Japan road that becomes a “snow corridor” with meters-high walls of the white stuff on (1) 27 side.

Snow is being removed along a winter-closed section of the “Hakkoda-Towada Gold Line” National Route 103 that (2) 28 the city of Aomori and Lake Towada to reveal the corridor, which (3) 29 the arrival of spring in the Hakkoda mountains.

This winter brought record-breaking snowfall. When workers began clearing snow on the 8-kilometer section between Sukayu^{*1} and Yachi^{*2}, the (4) 30 snow at Sukayu measured 4.4 meters deep, almost twice last year’s level. Crews use bulldozers to scoop up snow as rotary snowplows blow it aside, (5) 31 the road.

(The Mainichi, March 13, 2025)

*1 Sukayu : 酸ヶ湯(温泉地の名称)

*2 Yachi : 谷地(温泉地の名称)

【6】 次の文章を読み、(1)～(5)の答えとして最も適当なものをそれぞれ①～④の中から選びなさい。

解答番号は、(1) ～(5) 。

(配点 20 点)

The U.S. government is allowing the sale of chicken made from animal cells. California companies Upside Foods and Good Meat were granted permission to sell their products by the Agriculture Department.

Livestock doesn't need to be raised and killed to produce this new type of meat, which say is better for the animals and for the environment because land does not need to be cleared for grazing or growing feed. Currently, the U.S. uses over 1 billion acres of land for agriculture, or just over half of total land — the majority of which is used for grazing cattle.

The new type of meat is grown from the cells of animals in steel tanks. Though it's known in the industry as cultivated meat, it's sometimes called cultured meat, lab-grown meat or cell-based meat. There are more than 150 companies around the world trying to develop these food products. They're working on a variety of meats: chicken, beef, pork and lamb.

At this point, you can't buy these new meats at the grocery store — they will be initially rolled out at restaurants. Consumers can expect cultivated meat to be sold at a growing number of restaurants and small retailers within the next two to five years and on supermarket shelves within seven to 10 years, said Sebastian Bohn, a project manager specializing in cell-based food for CRB, a Missouri firm that designs and builds facilities for pharmaceutical, biotech and food companies.

It starts with cells, which can come from a fertilized egg, a special bank of stored cells or tissue initially taken from a living animal. The cells are mixed with a broth of nutrients that the cells need to grow and divide. Cells are triggered to turn into skeletal muscle, fat and connective tissues. After days or weeks, the cells are removed from the tanks and shaped into

products such as nuggets.

The easiest products to make this way are those usually made with ground meat, such as hamburgers and chicken nuggets. Some companies are working on products with more structure, such as chicken breasts and steaks. Those need a scaffold*, or structure for the cells to grow on, which can be vegetable-based or made of animal products like collagen.

Experts say it's real meat created in a different way. It's not the same as plant-based products such as Impossible burgers, which do not contain animal cells. Some versions of cultivated meat — including Good Meat chicken products — do contain a small amount of vegetable proteins. Upside Foods officials say their meat does not.

(The Mainichi, June 25, 2023(AP))

* scaffold : 足場

(1) What is the appropriate word to fill in the blank?

32

- ① competitors
- ② challengers
- ③ pessimists
- ④ proponents

(2) What is the primary reason for the U.S. to allow the sale of cultivated meat? 33

- ① Some people are against raising animals and killing them.
- ② More than half of the country's land is not cleared and should be used for agriculture.
- ③ They can eliminate the need to develop new land for livestock, which occupies much of the farmland.
- ④ More and more companies are developing a variety of cultured meat all over the world.

(3) Which will be the first place to introduce the new type of meat? 34

- ① Grocery stores.
- ② Restaurants.
- ③ Small retailers.
- ④ Supermarkets.

(4) Which is a FALSE statement about cultivated meat products? 35

- ① The initial cells are taken from a fertilized egg or tissue of a living animal.
- ② The broth of nutrients triggers cells to be shaped into products such as nuggets.
- ③ The products made with ground meat are not complicated to produce.
- ④ Plant-derived or collagen structures are necessary for the cells to grow on to become chicken breasts and steaks.

(5) Which is a FALSE statement according to this article?

- ① Impossible burgers are vegetable protein products.
- ② Cultured meat is not similar to plant-based products.
- ③ Some kinds of cultivated meat contain a little vegetable protein.
- ④ Cultivated meat inevitably needs vegetable protein for its production.
